

Environmental Policy

Onzo is a clean-tech start-up that designs intelligent services and products to give people the tools to better understand and manage their energy consumption.

At Onzo we understand that our organisational activities have an impact on the environment in which we operate, especially climate change. As a business we recognise the social and economic importance of protecting the environment and are fully committed to continuously improving our performance by:

1. Reducing our carbon footprint by 5-8% in the first year of our carbon reduction programme;
2. Implementing a business travel policy that promotes the lowest carbon impact transport whenever possible and offsets at least 50% of the carbon emissions resulting from necessary business travel;
3. Enhancing awareness internally and encouraging employees to act with a responsible attitude towards the environment, and participate in the steps we need to take to achieve our targets;
4. Expanding our recycling scheme and use of sustainable products at the workplace;
5. Minimising our use of natural resources such as energy and water, and maximising the efficient use of such resources.

This policy will be communicated openly to internal and external parties to encourage staff, business partners and members of the wider community to join us in this effort.

Onzo will ensure compliance with all relevant legislation and voluntary or corporate adopted policies, including the present statement.

This policy will be kept under annual review and progress against targets will be monitored on a regular basis to identify strengths and areas for improvement.

Joel Hagan
Chief Executive Officer
